

RETROFIT ANODE CLAMP SYSTEM

THE ANACONDA CLAMP™

Galvotec Corrosion Services

is the exclusive USA and Mexico distributor for the Imenco Anaconda Clamp™. This clamp was specifically developed to make reliable and effective mechanical and electrical connections for the bonding of retrofit sleds and anode arrays to existing pipelines or large diameter jacket members up to 38". It is simply guided into place by a diver or ROV and will self-close around the pipe or member, and is then torqued to a set tension. The Anaconda Clamp™ is also useful for the installation of new anode systems on subsea completion units, anchor pile systems and existing offshore structures.

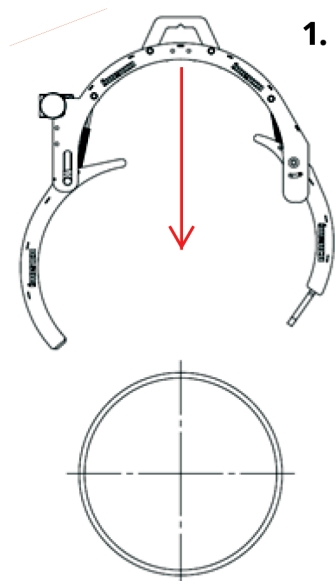

Patent pending

RETROFIT ANODE CLAMP SYSTEM

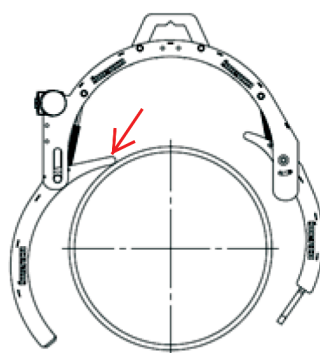

THE ANACONDA CLAMP™

Installation Sequence

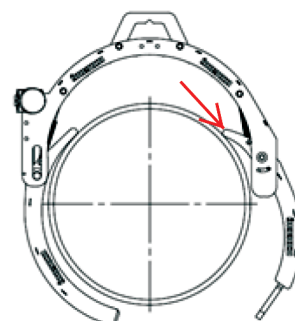

1. Entering pipe

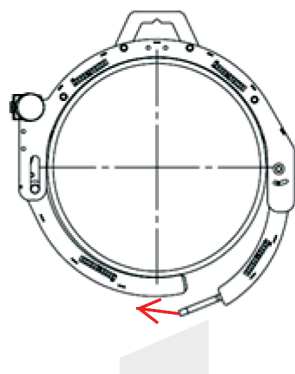

2. Left arm closing

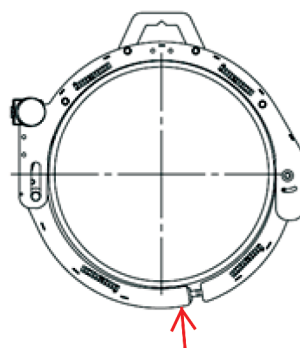

3. Right arm closing

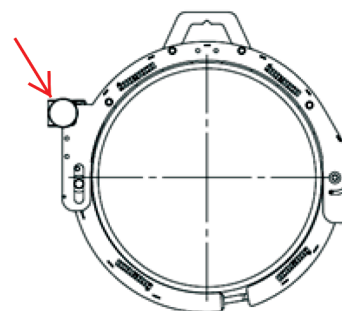

4. Arms connecting

5. Arms connected

6. Operate torque tool to complete installation
